**PROVA DE INGLÊS**

---

Read the following passage and choose the option which best completes each question, according to the text:

**Getting Real About the High Price of Cheap Food**

Horror stories about the food industry have been with us since 1906, when Upton Sinclair's novel *The Jungle* told ugly truths about how America produces its meat. Nowadays, things have got much better, and in some ways much worse. The U.S. agricultural industry can now produce unlimited quantities of meat and grains at remarkably cheap prices. But it does so at a high cost to the environment, animals and humans. Some of those hidden prices are the erosion of fertile farmland and the rise of antibiotic-resistant bacteria among farm animals.

Some Americans are noticing such warnings and working to transform the way the country eats — farmers who are raising sustainable food in ways that don't ruin the earth. Documentaries and the work of journalists are reprising Sinclair's work, awakening a sleeping public to the realities of how we eat. Change is also coming from the very top. First Lady Michelle Obama's White House garden has so far raised a lot of organic produce — and tons of powerful symbolism. Nevertheless, despite increasing public awareness, sustainable agriculture, remains a tiny enterprise: according to recent data from the U.S. Department of Agriculture, less than 1% of American cropland is farmed organically. Sustainable food is also pricier than conventional food and harder to find.

Unless Americans radically rethink the way they grow and consume food, they face a future of eroded farmland and high health costs. Sustainable food has an elitist reputation, but each of us depends on the soil, animals and plants. And as every farmer knows, if you don't take care of your land, it can't take care of you. **QUESTION 54**

Upton Sinclair's novel *The Jungle* was the first to

- a) call people's attention to the quality of food produced in America.
- b) instruct Americans on how to produce and sell better meat.
- c) deal with the problems concerning America's food industry profits.
- d) tell horror stories that led to the change of agricultural industry.

**QUESTION 55**

Today, the production of meat and grains in the U.S. is

- a) insufficient.
- b) limited.
- c) decreasing.
- d) enormous.
